

Putting people at the centre

Patient-Reported Indicators Survey initiative

Michael van den Berg
OECD

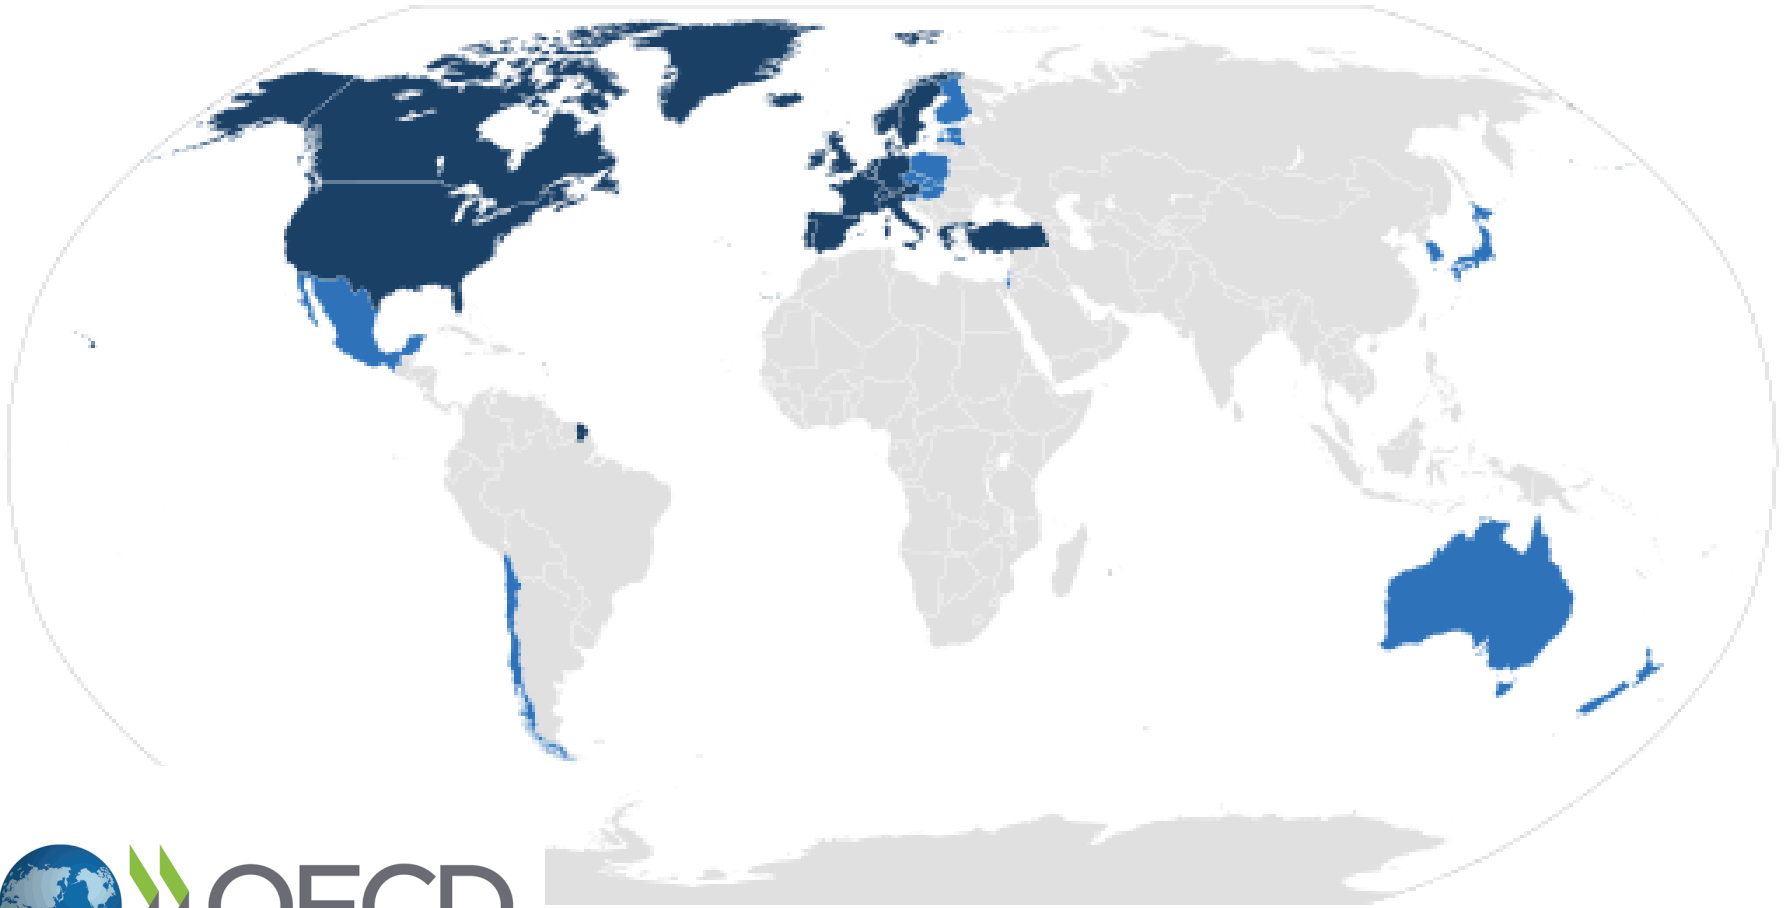

OECD: What we do

- Intergovernmental organisation
- We apply economic analysis to health and health systems
- Comprehensive, internationally comparable data
- Innovative modelling
- Policy advice
- Forum for governments and stakeholders

OECD countries

OECD

BETTER POLICIES FOR BETTER LIVES

Health systems across the OECD are facing similar challenges

Access to high quality care is unequal

Populations are changing: we are getting older and live longer with chronic conditions

A need to ensure financial sustainability in light of a tight fiscal environment

Policy failure to address main drivers of health spending

We have information gaps to address those pressures

- Health care seeks to improve people's **well-being** and their ability to realise goals. Yet health systems **know very little** about whether or not they are successful in this.
- We have good measures of inputs & outputs. But patients' ability to live **normal, functioning lives** is **rarely captured** in a robust, standardised way.

“We must fix this. We need a systematic and standardized approach to asking patients about the outcomes of their care that matter most to them”

Angel Gurria & Michael Porter: Putting people at the centre of healthcare. Huffington Post: 18 January 2017

To achieve better value we need better information on

To what extent are people in **pain** after **hip surgery**?

What is the **health-related quality of life** for people receiving **cancer** treatment?

Can people **live independently** after a **stroke**?

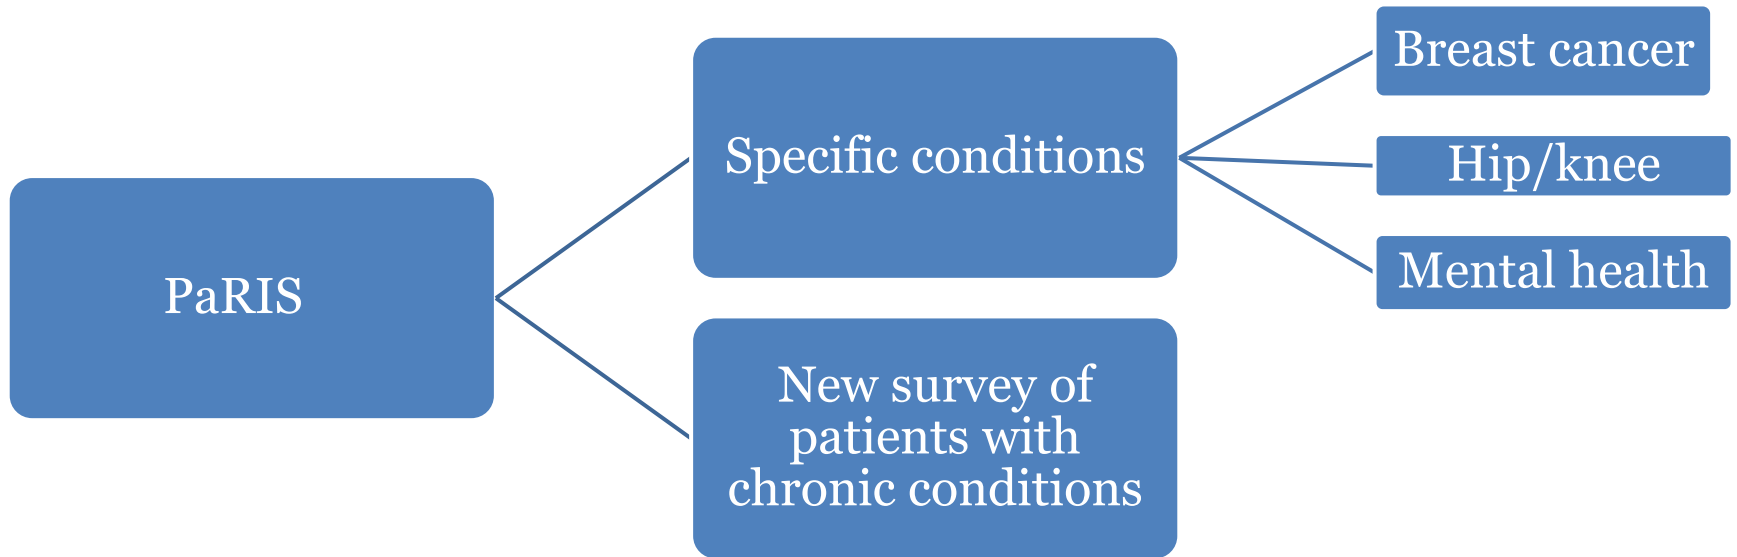

How well can people with a **mental health** condition **live independently** after discharge?

What was a person's **experience of their care**?

Streams of activities

Priority areas for specific conditions

Hip and Knee Replacement

- Working Group been meeting since Nov 2017
 - R&D work led by CIHI in Canada
 - Currently working on cross walks across existing tools, first data expected in 2019
-

Breast Cancer

- Working Group been meeting since Jan 2018
 - R&D work led by OECD.
 - Currently focussing on pilot data collection
-

Mental Health

- Working Group been meeting since July 2018
- R&D work led by Denmark
- Currently scoping issues for ongoing development
- Establishing a patient and carer advisory group

New international survey of patient-reported outcomes and experiences

- Focuses on **people aged 45+ with (multiple) chronic conditions**
- Covers both **outcomes and experiences**
- Settings: **ambulatory/ primary care** (best possible option to reach suitable patient populations internationally)
- Domains: Generic (overall health status); Physical functioning, Pain; Social functioning and participation
- Will develop sampling design, methods to assure validity/risk-adjustment (as done for PISA in education and PIAAC for adult competences)
- Plan to integrate digital technology to minimise collection cost

Governance

- Input from health professionals and patients
- Supported by technical groups and a high-level governance body

PaRIS will produce information on what health systems deliver to patients

- What you already know:
 - Life expectancy, mortality, prevalence / incidence, survival rates, etc.
- What the PaRIS survey adds:
 - How does healthcare impact outcomes that matter to people?
 - How well are patients functioning physically, mentally, socially?
 - How integrated is care that people receive?
 - How do people experience the healthcare they receive?

Different output, tailored to different users

- Variation across and within countries
- Country-specific dashboards and reports
- Focus publications that zoom in on specific questions
- Feedback data for providers (showing their outcomes compared to peers)
- Patient-level feedback data comparing patient's outcomes to comparable group of patients.

We benefit by doing this together

- International learning
- ‘Economy of scale’
- Best expertise and state-of-the art technology
- Possibility to get much more out of national initiatives by creating synergy
